**ABSTRACT OF THE DISCLOSURE**

10 A system and method for providing at least one search result responsive to receiving a  
search query comprising at least one search query term, includes receiving the search query;  
locating at least one record containing at least one search query term; displaying a text  
representation of each of the records containing at least one search query term; and displaying  
a representation of an object in relation with the text representation for each record that  
15 includes an object comprising at least one predetermined attribute. According to another  
embodiment of the invention, a method for indexing records in an index of an information  
network, includes the acts of: receiving a record; searching the record for an indication that  
an object comprising at least one specified attribute is to be displayed with the record; finding  
the indication; creating a representation of the object; storing the representation in association  
20 with the record to which it corresponds; and making an entry for the record in the index, said  
entry indicating the object to be displayed with the record.
